# Jansen Steel Systems Inspire Architecture

Jansen is a Swiss-based manufacturer of architectural steel systems for doors, windows, and facades, with a US subsidiary based in New York City. Designed by highly experienced Swiss and German engineers, Jansen's architectural steel systems combine industry-leading strength and thermal performance. Family owned since its founding in 1923, the third generation manages Jansen, whose steel systems grace the skylines of major cities worldwide.

Jansen America offers local support for architects, designers, glaziers, and fabricators interested in exploring creative architectural boundaries through the strength of premium steel architectural systems. Jansen remains committed to setting innovation benchmarks for sustainable, aesthetic, and unique solutions that inspire its customers.

# The Steel Advantage

The fabric of Jansen's DNA lies within cold-drawn steel, which produces firm, smooth architectural profiles – the cornerstone of steel systems – with high tensile and torsional strength. This makes them long, straight, strong and able to handle the rigors of powder coating ovens. In turn, that strength enables three key advantages: architectural creativity, environmental performance, and safety.

## Architectural Creativity

Strong architectural steel pushes the boundaries of unique shapes and sizes, enabling architects to create signature pieces that make buildings iconic.

## Environmental Performance

Industry-leading frame U-values maximize a building's thermal performance.

## Safety & Security

Strength protects from fire and smoke, bullets and blasts, burglary, and extreme weather.

# Product Applications That Are **ART**chitecture

Jansen's steel systems for doors, windows, and facades are ideal for high-end residential, commercial, and heritage renovations to historical landmark buildings. These profiles offer sophisticated standard solutions and equally cover complex special requirements.

## High-End Residential

Jansen's Finline 70 and Arte 2.0 steel systems are ideal for doors and windows. Art'15 and the Piet Boon Series offer elevated aesthetics for internal doors and partitions, ideal for luxury homes, yielding sophisticated beauty, and superior thermal performance without compromising living space.

## Commercial

Up to 6 meters (almost 20 feet) high, Jansen's VISS and Janisol oversized entrance doors are unique signatures that help turn buildings into masterpieces. VISS and Tecline steel facade systems provide remarkably large spans with views that people will remember and enable optimal thermal performance.

## Heritage

For over a century, steel has been the building material architects and designers have fondly chosen to make their masterpieces. Jansen's Finline 70 and Arte 2.0 thermal break systems are ideal for historical landmark renovations. They enable architectural freedom and improve thermal performance while maintaining the original design intent.

# The Jansen Advantage

Headquartered in the Rhine Valley of Switzerland – a construction and engineering innovation hub – Jansen develops, produces, and distributes industry-leading architectural steel profile systems with sophisticated standard and customized solutions.

## Legacy

Third-generation, family-owned, with over 100 years of steel experience, whose products grace today's European city skylines.

## A Valuable Partner

Offers architects and designers industry-leading software, technical consultation, and project management support.

## More Than a Profile

Full-steel systems include all materials for complete assembly with technical consultations available for custom solutions.
